

* Assignment - 3 *

Q1] What is the difference between Conference & journal?
Enlist 5 International conferences of repute belonging to your discipline.

→

Conference

- A gathering of professionals to present & discuss research
- To share recent findings, network, & gather feedback
- Quick, as proceedings are often published after event.
- Usually short papers
- Generally less rigorous; focuses on relevance & novelty

Journal

- Formal publications containing peer-reviewed articles.
- To provide platform for detailed & finalized research.
- Slower, as articles go through rigorous peer-review process.
- Comprehensive studies.
- More rigorous with multiple rounds of peer review.

Q2] Explain conference conduction steps from call of paper to publication of proceeding.

→

- 1) Call for Papers (CFP):-
Invite researchers to submit work with details on themes, deadlines & submission guidelines.
- 2) Paper submission:-
Authors submit papers via an online system.
- 3) Review Process:-
Experts evaluate submissions for originality, relevance & equality.

4) Acceptance Notification:-

Authors are notified of acceptance or rejection & may revise their papers.

5) Conference Event:-

Authors present papers through oral or poster sessions alongside keynotes & discussions.

6) Proceedings Compilation & Publication:-

Accepted papers are compiled, indexed & published in database like IEEE Xplore or Scopus.

Q3] Explain meaning of indexing of journals. Enlist different indexing in detail.

→

1) Scopus:-

- Multidisciplinary, managed by Elsevier.
- Provides citation metrics like h-index & Citescore.

2) Web of Science (WoS):-

- High-quality journals across disciplines.
- Offers impact factors & citation reports.

3) IEEE Xplore:-

- Specializes in engineering & technology.
- Indexes journals, conferences & standards.

4) Medline:-

- Covers life sciences, biomedicine & public health.
- Accessed through PubMed.

5) CAS:-

- Chemical literature indexing.
- Includes journal, patents & technical reports.

Q4] Describe following with example.

→ a) Scopus Index :-

- Multidisciplinary database by Elsevier, covering peer-reviewed journals, books & conference proceedings.

- Eg:- Renewable Energy journal indexed in Scopus.

b) SCI Index :-

- Tracks high-impact journals in science & technology, maintained by Clarivate Analytics.

- Eg:- Nature journal indexed in SCI.

c) Web of Science :-

- Comprehensive indexing platform for high-quality journals, including metrics like impact factor.

- Eg:- Journal of Cleaner Production indexed in WoS.

d) UGC Care :-

- List of journals approved by University Grants Commission (UGC) in India to ensure quality research publications.

- Eg:- Indian Journal of Agricultural Sciences listed in UGC Care.

Q5] Explain peer review process of journal.

→ 1) Submission :-

Author submits manuscript to journal.

2) Initial Screening :-

Editor checks for scope, format, & originality.

3) Review Assignment :-

Manuscript is sent to experts in field for evaluation.

4) Review Process:-

Reviewers assess quality, relevance, methodology & originality.

5) Feedback to Author:-

Reviewers provide comments & suggest acceptance, revision, or rejection.

6) Revisions:-

Author revises manuscript based on feedback & resubmits.

7) Final Decision:-

Editor decides on acceptance or rejection after reviewing revisions.

8) Publication :-

Accepted manuscript is published online or in print.
