

Mid Sem Review

Course: Scientific Research Methods-2

Objective: The main objective is to understand how to write review of a research paper and apply while doing further research and project work.

Background: In the sem I all the students were introduced with research methods and inclined towards applying the same while implementing ASEP project. As students were just entered into engineering, literature review was at the basic level. Now with the prior understanding about how to do literature review and apply it while doing research/project work, students are expected to do in depth literature review.

Problem to be assigned to the student for review:

Review a SCE/Scopus journal paper from your domain in not more than 2 pages. The review should cover all sections of the paper with more focus on objectives, methodology, results and discussion.

Regards

Dr. Shrikant S. Joshi
