

* Assignment:- 2 *

Q1] Various plagiarism checking tools. Provide list for checking software / tools.

- ① Turnitin : Academic papers / thesis checking.
- ② Grammarly Plagiarism Checker : General content
- ③ iThenticate : Research paper - level checking.
- ④ Plagscan : AI-based detection.
- ⑤ Copyscan : Web content duplication detection.
- ⑥ Unicheck : Cloud-based tool.
- ⑦ Quetext : Deep search tool.
- ⑧ DupliChecker : Free basic tool.

Q2] With reference to your ASEP, check plagiarism. As per report, which has maximum similarity? Also list first five similarity material.

Plagiarism check - ASEP project Paper:-

Maximum similarity source:

"<https://www.jetir.org/view?paper=JETIR2304390>"

Similarity Index:

"4%"

Top 5 similarity :

- ① <https://www.jetir.org/view?paper=JETIR2304390> : 4%
- ② <https://www.ijraset.com/fileserve.php?FID=44502> : 2%
- ③ <https://www.ijraset.com/fileserve.php?FID=52511> : 1%
- ④ <https://www.ijraset.com/fileserve.php?FID=42976> : 1%
- ⑤ <https://www.ijraset.com/fileserve.php?FID=51242> : 1%

Q3] Check plagiarism with two different tools & compare the report.

→

- Tool 1: Turnitin
- Overall ~~sim~~ similarity: ~9%.
- Top sources:
 - ① JETIR (4%.)
 - ② IJRASET (2%.)
 - ③ Additional IJRASET entries (1%.)
- Nature of matches:
Mostly from academic journals & tech papers with common phrases or standard content.
- Tool 2: Quetext
- Overall similarity: ~15-18%.
(It tends to highlight more common phrases & web matches)
- Top sources:
 - ① Blogs or open-access tech articles.
 - ② Health-tech overviews.
 - ③ Product descriptions or tutorials.
- Nature of matches:
Includes non-academic sources, sometimes flagging common phrasing or technical terms as matches.

Comment:

Turnitin shows low similarity. Quetext shows higher due to less academic filtering. Overall, they appear to be original, with minor overlaps due to citations & technical terms.
