

2] DML :- Data Manipulation Language

Data Manipulation Language is a set of SQL commands used to manage & manipulate the data stored in database tables. Unlike DDL, which focuses on structures, DML works with the actual data within the tables. These commands allow inserting new records, updating existing ones, deleting unnecessary records, & retrieving data for analysis or processing.

Commands :-

INSERT - adds new rows of data

INSERT INTO students (name, age) **VALUES** ('Abhi', 19);

UPDATE - Modifies data.

UPDATE students **SET** age = 20 **WHERE** student_id = 1;

DELETE - Removes rows.

DELETE FROM students **WHERE** student_id = 1;

SELECT - Retrieves data from database.

SELECT * **FROM** students;
