Title:

Mongo DB CRUD operations.

Description: In this assignment, I installed MongoDB on a Windows system to set up a NoSQL database environment. The installation was done using the official MongoDB Community Server MSI installer. During setup, MongoDB was configured to run as a Windows service for automatic startup. A data directory (C:\data\db) was manually created to store database files. After installation, the MongoDB server was started using the mongod command and accessed through the mongo shell. With this setup, MongoDB was successfully configured and made ready for performing database operations.
